## **Computer Repairs**

Any computer will experience faults or break down from time to time. Jupiter Information Technology can repair your computers when they go wrong.

Since Jupiter Information Technology is used to dealing with businesses, we are well aware that time is money, so usually offer a fast and efficient turnround on repairs.

Not only that, but Jupiter Information Technology will also make every effort to recover any data that may be at risk.

## **Computer Security**

Jupiter Information Technology is familiar with the security problems that can affect computers, and can give advice on how to minimise any security risks.

In addition, Jupiter Information Technology has devised the Jupiter Enhance Security package, a set of software tools, that will provide all round protection for any computer and peace of mind for you.

To back up this technology, Jupiter Information Technology also offers training in computer security.

## **Network Installation**

Jupiter Information Technology can setup and install networking, either using cable or wireless connections.

## **Network Security**

Connecting a computer to a network creates it's own problems and vulnerabilities. To minimise the threat from viruses or unauthorised users, Jupiter Information Technology can configure your network for maximum security.

In addition, Jupiter Information Technology recommends that staff attend security awareness training course.

## Virus Troubleshooting

Viruses and other malicious software are widespread on the internet, and it is easy for the unwary to suffer an infected computer, or worse, for the computer to be remotely hijacked by criminal gangs.

Jupiter Information Technology specialises in cleaning up and securing computers against virus threats.

## Business Continuity

If you are running a business, then it is vital that your computers should be available at all times. Sometimes, external events can cause your computer systems to become unusable, and this can happen at anytime, anywhere.

It is extremely important to have contingency plans in place before a disaster occurs, to enable a speedy recovery. Jupiter Information Technology can assist in devising a comprehensive Business Continuity Plan.

## Consultancy

Jupiter Information Technology is familiar with the IT marketplace, new and existing technology, and best practices. Where you need answers, but don't know the questions, then Jupiter Information Technology can assist.

## OpenOffice.org

Jupiter Information Technology can supply and provide consultancy services for the OpenOffice.org office productivity suite.

This software provides all the office functionality you could ever need, and through the use of open standards, will free your business from proprietary lock in. Not only that, but you can drastically reduce your software costs.

## Open Source Software

Jupiter Information Technology specialises in installing and supplying open source software. No longer do you need to be dependent upon proprietary solutions that devour your IT budgets.

Open Source software can be sourced and supported for many applications.

## **Software Development**

Jupiter Information Technology develops it's own software solutions. Amongst these are Fortifie, security enhancement software for Windows platforms, with full reporting capabilities.

Or, perhaps you need a bespoke software solution for your own particular problems? Speak to Jupiter Information Technology.

## **Training**

Jupiter Information Technology provides training courses for your staff, from simple 'how do I do this?' computer courses, to more specialised courses, such as Computer Security Awareness, for example. Improve the efficiency of your staff, and your business.

## **Web Development**

Jupiter Information Technology can develop web sites. If you just need a simple web presence, then we can do it. If you need something more sophisticated, such as a full web portal with forum and chat, for example, then Jupiter Information Technology can do that as well.

## **Web Hosting**

If you need a web site, then you will need somewhere to put it. Jupiter Information Technology's web hosting solution could be what you are after, using dedicated secure servers housed in secure, air conditioned buildings.
